

Fact Sheet

Esri South Africa is the exclusive local distributor of Esri's world-leading ArcGIS technology in southern Africa, and over the past three decades has built a strong track record of success, developing long lasting relationships with our customers in both the public and private sectors.

We believe in sustaining, supporting and growing spatial awareness within the geospatial community by providing software technology, professional services, education, thought leadership and community support. It has been extremely rewarding to see our valued customers grow from map-making desktop users, to helping solve increasingly complex problems that improve service delivery, reduce environmental impact, and advance operational performance. The success of the worldwide GIS community is evidence of both the enormous contributions our field is making in multiple industries and the life-changing social value of GIS practices.

Organisational Structure

Esri South Africa is a customer-centric organisation – our internal structure is designed to complement the customer journey as they discover, learn, procure, implement, use and support GIS software and solutions. We operate as a matrix organisation, with virtual teams established to support various customer-centric workflows by pooling resources from our various teams.

Our Network

Esri South Africa curates and incubates a broad network of partners that supports GIS and ArcGIS users across the region. Partners fulfil various roles including the development of bespoke software solutions, software enhancement, professional services and consulting, value-added data services and industry-specific customer support.

Our People

Esri South Africa prides itself in attracting, supporting and developing the very best in available talent. Our staff complement is sourced through various programmes, including internships, youth development schemes, and graduates from leading academic institutes. We have experienced staff with diverse backgrounds in GIS, technology, business development and domain-specific disciplines.

The application of GIS is limited only by the imagination of those who use it – Jack Dangermond

Our Users

Esri South Africa, as the distributor for the world's leading geographical information system technology for our region, supports a broad and diverse client base that covers almost all industries – applying the Science of Where to solve the significant challenges we face across our world today. Many of these customers have worked closely with us for decades.

Our Data Offering

Esri South Africa provides spatial data curation, collation and enhancement services to support our customers in realising the potential benefit of the ArcGIS System and related technologies.

Our Services

Through our team of highly skilled individuals, we provide a full range of professional services related to the implementation, extension and integration of ArcGIS and related technologies to our customer base within and between organisations.

National Government *Insurance* **Agriculture**
Telecommunications **Water Resources** *Electrical Utilities*
Mining *Disaster Management* **Local Government**
Economic Development **Transportation** *Forestry*

Our Technology

We are proud to be the region's sole distributor of Esri products that we sell, implement, extend, integrate and support for customers. Furthermore, we also provide a carefully curated set of complementary solutions from partners that extend the value and reach of ArcGIS to specific domains, use cases and regions – including asset management, imagery processing, geospatial data, technology platforms and automation/productivity tools. ArcGIS is the world's leading GIS technology and is a modern, integrated, service-oriented software platform. At Esri South Africa we develop our own extended ArcGIS solutions for our local market, including focussed products and solutions for local authorities, mining, commercial businesses and more.
